

# Jordan Rivera

+1 (555) 010-2287 | jordan.rivera@example.com | example.com/in/jrivera

Date of birth: 22 May 1997 | Nationality: Chilean

## EDUCATION

Northgate University | M.P.H. in Biostatistics | Metro City, USA | Sep 2019 - May 2021

## EXPERIENCE

Meridian Heart Institute | Clinical Research Coordinator | Metro City, USA | Sep 2022 - Jul 2025

- Coordinated a 3-site randomized trial of a nurse-led discharge program for 640 heart-failure patients, finishing enrollment 4 months early with 94% of follow-up visits completed.
- Cut data-entry errors in the trial database from 6.1% to 1.8% of fields by adding range checks and double entry for the primary outcome.
- Estimated median survival in each arm by averaging the follow-up time of patients who died, excluding censored patients.
- Reconciling adverse-event reports across three sites, coding them to MedDRA terms and cross-checking them against pharmacy records each week, cut unresolved safety queries from 45 to 6.
- Presented monthly safety reports to the data monitoring committee, and all 4 reviews passed without a protocol change.
- Trained 9 site nurses on the consent process and outcome forms, and no consent deviations were found at the final audit.

Northgate University Hospital | Research Assistant | Metro City, USA | Apr 2022 - Aug 2022

- Randomized patients by assigning those admitted on odd-numbered days to the program and even-numbered days to usual care.
- Interviewed 25 patients about missed clinic visits; the findings added text reminders that cut no-shows from 18% to 11%.
- Wrote the study's data dictionary for 180 variables, which the next two cohort studies reused.
- Cleaned and merged lab data from two hospital systems while also scheduling participant visits, ordering study supplies, taking minutes at lab meetings and covering the front desk, which resolved 1,200 mismatched patient identifiers.

## PROJECTS

Asthma Readmission Analysis | Independent Project | R | Jan 2025 - Present

- Harnessed cutting-edge analytics to deliver transformative, patient-centered insights into respiratory health outcomes.
- Found that 7-day follow-up cut readmission from 12% to 8%, a 50% reduction, after adjusting for age and insurance.
- Raised the survey response rate by 20% with SMS reminders, from 35% to 55% of invited residents.

Community Health Survey | Volunteer, Team of 5 | REDCap | Mar 2020 - Aug 2020

- Designed a 30-question community health survey and collected 1,100 responses, giving the clinic its first estimate of uninsured residents by neighborhood.
- The survey was translated into Spanish and piloted with 20 residents before launch.
- Wrote the survey's data codebook, which the clinic used for its follow-up survey the next year.

## SKILLS

Tools: R, REDCap

Methods: randomized trials, regression, mixed-effects models, survey design
