Date of birth: 9 Jan 1998 | Nationality: Brazilian

EDUCATION

Eastmoor University | B.S. in Statistics | Metro City, USA | Sep 2016 - May 2020

EXPERIENCE

Brightcart Retail | Data Analyst | Metro City, USA | Aug 2022 - Jun 2025

- Built the weekly retention dashboard for 2.4M customers that marketing used to retarget lapsed buyers, lifting 90-day repeat purchase from 22% to 27%.
- Cut the monthly revenue report from 3 days of spreadsheet work to 2 hours by moving it to scheduled SQL queries and a shared dashboard.
- Found customers with no orders by left-joining the orders table to the customers table and counting rows with a null customer name.
- Joining 40 source tables, deduplicating customer records across two loyalty systems and rebuilding the attribution logic in dbt-style SQL models, raised the share of orders tied to a campaign from 58% to 81%.
- Presented the quarterly customer review to the leadership team, and two of its three recommendations were funded in the next budget.
- Trained 20 merchandisers to answer their own questions with the self-serve dashboards, halving ad hoc data requests.

Pinecrest Insurance | Junior Analyst | Metro City, USA | Apr 2021 - Jul 2022

- Ran the checkout A/B test until significance by checking the p-value every day and stopping on the first day it fell below 0.05.
- Analyzed 18 months of call-center data; the findings moved two agents to the evening peak and cut average hold time from 9 to 5 minutes.
- Wrote the team's SQL style guide and review checklist, which cut query errors found in review by half.
- Automated the monthly fraud-flag extract while also maintaining the team calendar, answering ad hoc questions from sales, updating onboarding documents and covering the help desk on Fridays, which saved the fraud team 10 hours a month.

PROJECTS

City Bike-Share Demand Study | Independent Project | Python, SQL | Jan 2025 - Present

- Leveraged data-driven insights and advanced analytics to unlock actionable value for urban mobility stakeholders.
- Cut empty-station hours from 300 to 200 a week, a 50% reduction, in a replay of last summer's rebalancing.
- Raised forecast hit rate by 15% across 120 stations, from 60% to 75%, by adding weather and event features.

Food Pantry Visit Analysis | Volunteer, Team of 3 | Excel, SQL | Mar 2023 - Aug 2023

- Mapped 14 months of pantry visits by hour and day, so the pantry moved one volunteer shift and cut the Saturday line from 50 to 20 minutes.
- 9,000 handwritten visit logs were cleaned into a single table and repeat visitors were matched, so the pantry had its first count of unique households.
- Wrote a one-page guide the pantry coordinator used to update the visit table each month after the project ended.

SKILLS

Tools: SQL, Python, Excel

Methods: dashboards, forecasting, metric design, data-quality checks
