EDUCATION

Northgate University | M.P.H. in Biostatistics | Metro City, USA | Sep 2019 - May 2021

EXPERIENCE

Summit Climbing Gym | Front Desk Staff | Metro City, USA | Sep 2025 - Present

- Checked in about 150 climbers a shift and sold day passes and memberships.
- Ran the weekend rental desk and logged gear inspections for the manager.

Meridian Heart Institute | Clinical Research Coordinator | Metro City, USA | Sep 2022 - Jul 2025

- Reduced data-entry errors by 70% by adding range checks and double entry for the primary outcome.
- Estimated median survival in each arm by averaging the follow-up time of patients who died, excluding censored patients.
- Built the enrollment tracker the three sites reviewed each week, flagging sites more than 10% behind target.
- Presented monthly safety reports to the data monitoring committee, and all 4 reviews passed without a protocol change.
- Established that the program was equivalent to usual care because the superiority test on readmission was not significant ($p = 0.41$).
- Coordinated a 3-site randomized trial of a nurse-led discharge program for 640 heart-failure patients, finishing enrollment 4 months early with 94% of follow-up visits completed.

Northgate University Hospital | Research Assistant | Metro City, USA | Jul 2021 - Aug 2022

- Screened 2,300 medical records for a diabetes cohort study, confirming eligibility for 410 patients against the protocol criteria.
- Interviewed 25 patients about missed clinic visits; the findings added text reminders that cut no-shows from 18% to 11%.
- Wrote the study's data dictionary for 180 variables, which the next two cohort studies reused.
- Cleaned and merged lab data from two hospital systems while also scheduling participant visits, ordering study supplies, taking minutes at lab meetings and covering the front desk, which resolved 1,200 mismatched patient identifiers.

PROJECTS

Asthma Readmission Analysis | Independent Project | R | Jan 2025 - Present

- Harnessed cutting-edge analytics to deliver transformative, patient-centered insights into respiratory health outcomes.
- Found that follow-up within 7 days was linked to lower readmission: 8.2% against 11.9% without it, after adjusting for age and insurance.
- Presented the analysis at the state public-health conference poster session.

Community Health Survey | Volunteer, Team of 5 | REDCap | Mar 2020 - Aug 2020

- Designed a 30-question community health survey and collected 1,100 responses, giving the clinic its first estimate of uninsured residents by neighborhood.
- The survey was translated into Spanish and piloted with 20 residents before launch.
- Ran a randomized discharge study of more than 600 heart-failure patients that completed enrollment months ahead of schedule.

SKILLS

Tools: R, REDCap, SAS

Methods: randomized trials, regression, mixed-effects models, survey design
