

Avery Brooks

+1 (555) 010-3319 | avery.brooks@example.com | example.com/in/abrooks

Date of birth: 9 Jan 1998 | Nationality: Brazilian

EDUCATION

Eastmoor University | B.S. in Statistics | Metro City, USA | Sep 2016 - May 2020

EXPERIENCE

Pinecrest Insurance | Junior Analyst | Metro City, USA | Jul 2020 - Jul 2022

- Owned the claims backlog report and the weekly numbers the claims managers used.
- Analyzed 18 months of call-center data; my findings moved two agents to the evening peak and cut average hold time from 9 to 5 minutes.
- Wrote the team's SQL style guide and review checklist, which cut query errors found in review by half.
- Automated the monthly fraud-flag extract while also maintaining the team calendar, answering ad hoc questions from sales, updating onboarding documents and covering the help desk on Fridays, which saved the fraud team 10 hours a month.

Brightcart Retail | Data Analyst | Metro City, USA | Aug 2022 - Jun 2025

- Improved reporting efficiency by 90% by moving the monthly revenue report to scheduled SQL queries.
- Found customers with no orders by left-joining the orders table to the customers table and counting rows with a null customer name.
- Wrote data-quality checks on the 40 most-used tables, catching 15 broken loads before they reached a dashboard.
- Presented the quarterly customer review to the leadership team, and two of its three recommendations were funded in the next budget.
- Reported the national conversion rate as the simple average of 14 regional conversion rates, without weighting by regional traffic.
- Built the weekly retention dashboard for 2.4M customers that marketing used to retarget lapsed buyers, lifting 90-day repeat purchase from 22% to 27%.

PROJECTS

City Bike-Share Demand Study | Independent Project | Python, SQL | Jan 2025 - Present

- Modeled hourly bike-share demand for 120 stations from 2 years of public trip data, forecasting next-day demand within 12% mean absolute error.
- Compared the forecast with the operator's rebalancing schedule: empty-station hours fell from 310 to 205 a week in a replay of last summer.
- Published the notebooks and a short write-up, which the city's open-data team linked from its bike-share page.

Food Pantry Visit Analysis | Volunteer, Team of 3 | Excel, SQL | Mar 2023 - Aug 2023

- Mapped 14 months of pantry visits by hour and day, so the pantry moved one volunteer shift and cut the Saturday line from 50 to 20 minutes.
- Cleaned 9,000 handwritten visit logs into a single table and matched repeat visitors, giving the pantry its first count of unique households.
- Built a retention dashboard for about 2.4 million shoppers that raised repeat purchases by nearly a quarter.

SKILLS

Tools: SQL, Python, Excel

Methods: dashboards, forecasting, metric design, data-quality checks
