EDUCATION

Riverbend Polytechnic | B.S. in Industrial Engineering | Metro City, USA | Sep 2014 - May 2018

EXPERIENCE

Greenleaf Florist | Delivery Driver and Shop Assistant | Metro City, USA | Sep 2025 - Present

- Delivered 30 to 40 arrangements a day across the city and took cash and card payments at the door.
- Prepared weekend wedding orders with the head florist and kept the cooler stocked and labeled.

Lakeview Distribution | Operations Analyst | Metro City, USA | Jul 2018 - Jan 2021

- Owned the pick-path layouts for the fast-moving zone and the labor reports the shift leads used.
- Ran a time study of the returns desk; the findings led to a triage station that cut returns processing time from 3 days to 1.
- Wrote the dock scheduling rules for 12 carriers, cutting average trailer wait at the dock from 95 to 40 minutes.
- Set up cycle counting for the 2,000 highest-value locations while also covering night-shift supervision, updating the safety training slides, coordinating holiday temp hiring and running the forklift certification schedule, which raised inventory record accuracy from 91% to 98.5%.

Crestway Foods | Supply Chain Planner | Metro City, USA | Feb 2021 - Jul 2025

- Rebuilt weekly demand planning for 1,400 SKUs across 3 distribution centers with a seasonal forecast model, cutting stockouts from 6.2% to 2.8% while inventory fell by \$1.9M.
- Reduced freight costs by 15% by consolidating supplier pickups into regional milk runs.
- Set reorder points for every SKU from 18 months of daily demand and supplier lead-time data, reviewed monthly with the category managers.
- Built the weekly supplier scorecard for 40 vendors, which buyers used to renegotiate delivery windows with the five least reliable.
- Raised the packaging line's overall equipment effectiveness (OEE) from 71% to 112% by cutting changeover time and micro-stops.
- Cut average order lead time through the warehouse from 10 days to 5 while holding daily throughput constant and doubling work-in-process to keep pickers busy.

PROJECTS

Last-Mile Routing Study | Independent Project | Python | Oct 2024 - Present

- Modeled a regional grocer's 85 daily delivery stops as a vehicle-routing problem, cutting planned route miles 18% against the grocer's current routes.
- Checked the planned routes against 4 weeks of real delivery logs; planned drive times came within 5% of the actual ones.
- Shared the model and a one-page summary with the grocer's dispatch team, who piloted the routes on two trucks for a month.

Regional Food Bank Warehouse | Volunteer Consultant, Team of 4 | Excel | Mar 2022 - Jul 2022

- Analyzed warehouse operations and made recommendations to the food bank's leadership.
- The donation intake process was mapped and two duplicate data-entry steps were removed, so donations reached the shelves a day sooner.
- Built a seasonal forecast for 1,400 products across three warehouses that more than halved stockouts and cut inventory by nearly \$2M.

SKILLS

Tools: Excel, Python

Methods: demand forecasting, inventory planning, time studies, vehicle routing
