Date of birth: 3 Mar 1997 | Nationality: Canadian

EDUCATION

Lakeshore University | B.A. in Cognitive Science | Metro City, USA | Sep 2015 - May 2019

EXPERIENCE

Pinegrove Financial | Senior UX Researcher | Metro City, USA | Mar 2022 - Jun 2025

- Cut the card-dispute form's abandonment rate from 37% to 22% in a four-week A/B test by splitting it into three short steps with saved progress.
- Ran 18 moderated usability sessions a quarter from a recruiting panel of 400 customers, so every major release was tested with real account holders before launch.
- Synthesizing 60 interviews, 400 survey responses and 18 months of support tickets through affinity mapping, journey mapping and a tagged clip library, cut repeat support calls about statements by 23%.
- Raised the onboarding flow's System Usability Scale score from 68 to 104 across two rounds of moderated testing with 20 customers.
- Validated the redesigned app navigation's findability with an open card sort of 30 customers before it shipped.
- Led research on the mobile onboarding flow, testing three prototypes with 24 new customers; the shipped design raised completed sign-ups from 41% to 58% in the quarter after launch.

Northwind Health | UX Research Associate | Metro City, USA | Apr 2020 - Feb 2022

- Ran the monthly patient survey and rebuilt its reporting dashboard, cutting the time from survey close to published findings from 3 weeks to 4 days.
- Interviewed 40 patients about appointment reminders; the findings led to a two-way text reminder that cut missed appointments from 14% to 9%.
- Wrote the screener and consent templates for all patient studies, cutting study setup time from two weeks to three days.
- Tested the telehealth waiting-room screens with 16 older patients; the revised layout cut support calls about joining a video visit by 30%.

PROJECTS

Accessible Transit Map | Independent Project | Figma | Sep 2024 - Present

- Championed an inclusive, human-centered design approach to transit wayfinding that delivered meaningful, user-first outcomes.
- Cut median route-finding time from 90 to 60 seconds, a 50% improvement, by adding audio landmarks and high-contrast line colors.
- Raised task success by 20% across 12 participants, from 65% to 85%, with audio landmarks and high-contrast line colors.

Community Clinic Booking Redesign | Volunteer, Team of 3 | Figma | Mar 2023 - Aug 2023

- Redesigned a free clinic's online booking flow, cutting the steps to book from 9 to 4; phone bookings fell by a quarter in the next two months.
- Recruited 10 clinic patients and ran two rounds of hallway testing, fixing the six issues that stopped first-time users from finishing a booking.
- Wrote the clinic's volunteer handbook for maintaining the booking pages, which two later volunteer teams used to add Spanish-language booking.

SKILLS

Tools: Figma, screen-reader testing (VoiceOver, NVDA)

Methods: moderated and unmoderated usability testing, interviews, surveys, A/B testing
