Date of birth: 14 Nov 1995 | Nationality: Mexican

EDUCATION

Riverbend Polytechnic | B.S. in Industrial Engineering | Metro City, USA | Sep 2014 - May 2018

EXPERIENCE

Crestway Foods | Supply Chain Planner | Metro City, USA | Feb 2021 - Jul 2025

- Cut inbound freight cost per pallet from \$48 to \$41 over two quarters by consolidating supplier pickups into four regional milk runs.
- Set safety stock for all 1,400 SKUs with the economic order quantity (EOQ) formula, balancing ordering and holding costs.
- Built the weekly supplier scorecard for 40 vendors, which buyers used to renegotiate delivery windows with the five least reliable.
- Led the monthly sales and operations planning meeting, reconciling the sales forecast with plant capacity for the finance and production teams.
- Cut average order lead time through the warehouse from 10 days to 5 while holding daily throughput constant and doubling work-in-process to keep pickers busy.
- Rebuilt weekly demand planning for 1,400 SKUs across 3 distribution centers with a seasonal forecast model, cutting stockouts from 6.2% to 2.8% while inventory fell by \$1.9M.

Lakeview Distribution | Operations Analyst | Metro City, USA | Jul 2018 - Jan 2021

- Redesigned the pick paths for the fast-moving zone, cutting walking distance per order by 28% and raising picks per labor hour from 92 to 110.
- Ran a time study of the returns desk; the findings led to a triage station that cut returns processing time from 3 days to 1.
- Wrote the dock scheduling rules for 12 carriers, cutting average trailer wait at the dock from 95 to 40 minutes.
- Set up cycle counting for the 2,000 highest-value locations while also covering night-shift supervision, updating the safety training slides, coordinating holiday temp hiring and running the forklift certification schedule, which raised inventory record accuracy from 91% to 98.5%.

PROJECTS

Last-Mile Routing Study | Independent Project | Python | Oct 2024 - Present

- Spearheaded a data-driven, optimization-first transformation of last-mile logistics that unlocked significant efficiency gains.
- Cut average route length from 120 to 90 miles, a 40% reduction, by solving the routing problem with customer time windows.
- Shared the model and a one-page summary with the grocer's dispatch team, who piloted the routes on two trucks for a month.

Regional Food Bank Warehouse | Volunteer Consultant, Team of 4 | Excel | Mar 2022 - Jul 2022

- Re-slotted the food bank's dry-goods warehouse by turnover, cutting volunteer picking time per pantry order from 25 to 15 minutes.
- Mapped the donation intake process with the warehouse lead and removed two duplicate data-entry steps, so donations reached the shelves a day sooner.
- Built a seasonal forecast for 1,400 products across three warehouses that more than halved stockouts and cut inventory by nearly \$2M.

SKILLS

Tools: Excel, Python, SAP

Methods: demand forecasting, inventory planning, time studies, vehicle routing
